Public Abstract

After the Closed Loop Campaign finished in May 2016, the User Terminal for each of the Timing Services have been deployed at User premises, initiating thus the second experimentation phase foreseen in the frame of DEMETRA project: the End to End Campaign started on June 27th, 2016.

The Users involved in the experimentation are part of different market sectors: telecommunications, broadcasting, finance, national metrology institutes.

During the period from July to October 2016, each TSI developer assessed its own service at user premises on the basis of the KPI results available also on the DEMETRA webpage.
